## UNIT III：Worksheet 2

For each of the following problems write the fundamental mathematical model to use，rearrange it to the form required to solve the problem，then solve the problem．Be sure to label appropriately．

| 1．A student drops a pumpkin off the top of a very tall building．Find： | 2．Repeat question 1 for a pumpkin falling on the moon．The acceleration due to gravity there is $-1.7 \mathrm{~m} / \mathrm{s}^{2}$ ． |
| :---: | :---: |
| a．its displacement at $\mathrm{t}=3 \mathrm{~s}$ |  |
| b．the time for it to reach a speed of $-25 \mathrm{~m} / \mathrm{s}$ |  |
| c．the time required for it to fall -300 m $\square$ $\square$ <br> ：回苗 |  |
| d．its velocity after falling－70 m 吅 <br>  |  |

3．A ball is dropped from rest at a height of 80 m above the ground．
a．How long does it take for it to reach the ground？

b．What is its speed just as it hits the ground？
4. A marble dropped from a bridge strikes the water in 6.0 s . Calculate:
a. the velocity with which it strikes the water
b. the height of the bridge
5. Now the student gives the pumpkin an initial velocity of $-20 \mathrm{~m} / \mathrm{s}$. What is the:
a. acceleration of the object
b. displacement after 4 s
c. time required to reach a velocity of $-50 \mathrm{~m} / \mathrm{s}$
6. When a kid drops a rock off the edge of a cliff, it takes 4.0 s to reach the ground below. When he throws the rock down, it strikes the ground in 3.0 s . What initial speed did he give the rock? Hint: This is a two step problem.
